

## An Elegant and Functional Interpretation of Elevation

Prosupport System is a pedestal system developed by Progress Profiles to satisfy any requirements for raised floors. Asolo, Italy -- Prosupport System is a pedestal system developed by Progress Profiles to satisfy any requirements for raised floors. A modular and adjustable pedestal support, Prosupport System is available with a flat stationary head or a self-levelling/adjusting head, with drain holes and anti-noise rubber.

The cornerstone of the system is Prosupport Profile, an edge profile for the protection and finishing of the external edge of ceramic, wood and composite floors. The vertical side has inclined flaps in a swallowtail shape for the fixing of the rise with suitable adhesives. The profile is also available with a 2 cm decorative side. The system comes in two patented design solutions, which combine elegance and practicality.
