HERRINGBONE, WATER-RESISTANCE AND INNOVATIVE ULTRA MATT LACQUER: NEW MEISTER LINDURA RANGE

MEISTER announces the launch of its new Lindura range, which will be put on the market on 1st April 2022. From the high-end flooring, origin has been upgraded with new additions! The resource-efficient Lindura wood flooring has been visually and technically upgraded with numerous new product features. The ultimate jewel of the HD-400 collection (E2 naturally oiled, 120 ultra-matt lacquered) are now merged with Aquatica edge (integrating light) making them water-resistant for 24 hours and suitable for humid rooms. This provides even more safety in the kitchen and bathroom, and enables installation in the bathroom. All surfaces have been successfully tested to ensure an antibacterial effect.

OSMO: MAINTENANCE AND CARE FOR TIMBER DECKING

The right care extends the life of decking and provides higher durability, plus, it's easy to use. For a quick scrub up, Osprey Decking with a mixture of water and Osmo Decking Cleaner. If your garden deck is weathered and grey, Osmo Wood Reviver Power-Gel will restore it to its natural wood colour. To protect timber decking optimally, the wood specialists at Osmo recommend applying Osmo Decking Oil. It has been formulated to meet the specific needs of countless fire and softwood products, empowers the wood on face and makes it water and dirt resistant.

STAUF: PARQUET AND SUBFLOOR HEATING: A FIRM, LONG-LASTING CONNECTION

While the combination of parquet and underfloor heating systems used to be quite problematic, today it is a matter of course. Decides for the success of the connection are the use of the right parquet adhesive and the correct installation of the parquet. The adhesive specialist STAUF, for example, only has parquet adhesives in its range that are suitable for bonding to underfloor heating. Two of them – STAUF SP10 and STAUF SP1 – can now be used as vapour retarders on heat-conducting cement screeds!

It is important that the parquet floor is firmly bonded to the professionally prepared underfloor heating surface. In this way, no layer of air can form between the wood and the wooden floor, which would inhibit the flow of heat into the room. Good parquet conducts heating energy faster and better, and the floor will usually never disintegrate. Once the parquet floor is firmly bonded to the underfloor, they can be worked several times. Thus, this connection really lasts a lifetime.
