

PROTECTIVE CAPS for rods for adjacent pours

HD POLYETHYLENE

The protective caps have been created to comply with the safety regulations as per Italian law **81/2008**. They protect the end of the protruding rods, thereby preventing injury to operators. Two types for different diameters are available.

SAFETY BOX for reinforced concrete elements

GREY HD POLYETHYLENE

The CAS type safety box is in compliance with Italian law **81/2008** on the safety in erecting reinforced concrete and precast elements. It is inserted closed into the panel or the beam as soon as casting is completed. The covers are opened before erecting in order to insert the pole. Upon completion of work, close and waterproof the holes to prevent the infiltration of water and therefore of damp.
